DETAILED ACTION

The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 5, 6 are rejected under 35 U.S.C. 102(e) as being anticipated by Groe (6,795,843).

Regarding claim 1, 5, Groe (Fig. 10) discloses a differential circuit comprising: a differential amplifier (1002) for receiving a differential input signal (V_{in}) and generating a differential output signal (V_{out}); an integrator (1006) operable as a comparator for generating an adjustment signal (control signal (1004) based at least in part upon the differential output signal (V_{out}); and a control circuit (1008) operable as a current controller for controlling current steering and at least one offset current in the differential amplifier (1002) based at least in part upon the adjustment signal (1004) and a current steering control signal.

Regarding claim 6, wherein the differential input signal (V_{in}) inherently seen having differential multi-PAM input signal.

Allowable Subject Matter

Claims 2-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 7-22 are allowed.

Claims 2-4 call for, among others, a first and second differential pair.

Claims 7-22 call for, among others, a multiplexer having at least one differential reference signal having a differential twist voltage reference signal.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The additional references (Nakamura (5,838,199); Behzah (6,759,904)) show further analogous prior art circuitry.
